DOES YOUR BABY NEED EVIVO®?
ASK YOUR PEDIATRICIAN.

Your baby’s pediatrician is a helpful resource for guidance in protecting baby’s gut now for a healthy future ahead. Here are some key questions to get you started. Print this PDF, screenshot it on your mobile phone or device, or email it to your doctor directly and begin this important conversation today.

5 KEY QUESTIONS ABOUT BABY’S GUT HEALTH

1. What’s gut health and why is it important to my baby?
   Early in life, the right gut bacteria is critical to gut health. However, most babies born today lack the good gut bacteria *B. infantis*, important for proper development of the immune system and metabolism for lifelong health.

2. Why is this critical good bacteria missing from baby’s gut?
   Over decades, the widespread use of antibiotics, including those linked to Group B strep, and the common practice of C-sections, led to the disappearance of the good bacteria *B. infantis* in baby’s gut.

3. What happens without this good bacteria?
   Without *B. infantis*, harmful gut bacteria can thrive. These bacteria are linked to higher risk of colic and autoimmune conditions like eczema, allergies, diabetes, and obesity.

4. How can I replace the good gut bacteria and protect my baby?
   Evivo is the only baby probiotic clinically proven to restore key good bacteria, *B. infantis*, to baby’s gut and reduce bad gut bacteria by 80%, including specific strains of *E. coli*, Clostridium, Staphylococcus and Streptococcus.

5. When should I give my baby Evivo?
   Now. Evivo is critical in the first year for the proper development of baby’s immune system and metabolism.

Ask your pediatrician for a sample or coupon today.

**WHAT’S IN EVIVO®?**

**100% GOOD BACTERIA FOR BABY.**

*(activated *B. infantis* EVC001)*

Evivo. The only baby probiotic clinically proven to restore a baby’s gut microbiome to its intended natural state, reducing harmful bacteria in baby’s gut by 80%.

**THE FIRST AND ONLY CLINICALLY PROVEN PROBIOTIC FOR BABIES.**

Evivo baby probiotic is the result of over a decade of research and clinical trials with University of Davis, California Medical Center. In our most recent clinical trial, babies were given Evivo once a day for a month and were compared to breastfed babies who didn’t receive any probiotic. After a month, Evivo babies had significantly higher levels of the key good bacteria, *B. infantis*, in their gut compared to babies who didn’t receive any Evivo. Our peer-reviewed research has been published in numerous well-respected journals, including *mSphere*, *BMC Pediatrics*, and *Human Microbiome Journal*.

Our breakthrough findings about the baby gut microbiome and infant probiotics are covered in notable publications around the world, including The New York Times, Newsweek, Today, NPR, Nature, and Popular Science.

**Preparation of Feedings** — Feed Evivo once a day, every day.

1. **Pour**
   - Pour 1 sachet of Evivo powder into the included mixing bowl.

2. **Mix**
   - Add 3-5 mL of breast milk to the powder and mix well.

3. **Feed**
   - Feed to baby using enclosed syringe. Do not add to bottle. Use immediately once mixed. Do not store for later use.

4. **Protect**
   - One packet per day is all baby needs.

No bottles — Do not use a bottle to feed Evivo to baby. Just follow the simple directions provided.

**Nutrient Facts**

- *Bifidobacterium longum* subsp. *infantis* EVC001
  - 0.04 g

- Lactose
  - Lactose is the only sugar naturally found in breast milk AND the only sugar babies should be consuming
  - 0.59 g

- CFU
  - 8 billion CFU per sachet

**Ingredients**

- *Bifidobacterium longum* subsp. *infantis* EVC001
- Lactose

**CFU Count**

- 8 billion CFU per sachet

**Recommended Use**

- Once daily

**Potential Allergens**

- May contain trace amounts of soy and/or milk protein

**Cleaning**

- Thoroughly clean bowl and syringe after each use with hot soapy water, remove syringe plunger from barrel before cleaning and allow to dry separately.

**Storage**

- Keep frozen until ready to use — will keep in refrigerator for up to 1 month.

No heat — Please do not heat Evivo or reheat with breast milk. Evivo is live bacteria and heat can hamper effectiveness.
